Class 2

This week in Class 2, we had an exciting visit from some doctors from the Teddy Bear hospital. The children learnt about the importance of keeping their bodies healthy, which supported their learning in science. They talked about what food is healthy, when to ring 999 and what support you can get when you need help. We also learnt about the organs inside our bodies and why we need to keep them fit and healthy.

In computing, we have been learning how to give a set of instructions. We instructed our class robot (Miss Nugent) on how to make a jam sandwich and when doing so, we had to make sure that these instructions were precise and if an error occurred, we had to debug the robot. Following this activity, we went outside in pairs and instructed our partner how to get from one spot to another with precise instructions.
