Class 2

This week in science, we have been investigating how the shapes of solid objects can be changed by stretching, twisting, bending and squashing. The children worked in groups to explore this with a variety of objects such as elastic bands, t-shirts and rulers. The children were then to note down their findings in their workbooks.

In geography this week, as a class we made our own rain gauge by using an empty bottle, scissors, jelly, sticky tape and a ruler. Once we made this, we found a space outside to place it in. Every day at the same time for a week, we have been measuring the amount of rain collected.
